By typing our names and student numbers in the above table, we certify that the work in the attached assignment was performed solely by those whose names and student IDs are included above.

In addition, we indicate that we are fully aware of the rules and consequences of plagiarism, as set forth by the Department of Computer Science and the University of British Columbia

Project Description

The domain of our project is electronics project management. The idea is to allow users to create projects and add electronic components (such as resistors, capacitors, etc.) for organizational/tracking purposes. They can also choose suppliers for the components and track orders from those suppliers. Users can add locations (e.g., drawers, component bins, etc.) to both their components and projects to be able to find them better, something especially important for the components as they can get lost easily.
